### Caratteristiche:

Early School Leaving (ESL) is a pressing concern in all EU countries because it is directly related to unemployment,

## CORSI DI FORMAZIONE IN SPAGNA

social exclusion and poverty, especially. The Europe 2020 strategy has set the goal of reducing the proportion of school leavers to below 10%. This training course will focus on preventing ESL.

In this course, teachers and trainers will understand the experiential learning methodology and learn how to create a stimulating and engaging learning climate. By adopting an inclusive learner-centred vision of education, teachers can increase motivation and sense of belonging among students, irrespective of individual and family-related factors, socio-economic status or life experiences. With this form of active learning, all learners and their diverse needs are at the centre of education. They are the actors of their own learning.

The nature of this course is highly practical and hands on, so the participants will learn about Kolb's Experiential Learning Cycle (Experiencing, Reviewing, Concluding, Planning and Transfer of learning) through group dynamics, role plays and practical activities.

**Caratteristiche:** This course has been created for teachers who want to guide their classes through the tensions, relational struggles, and aggressive behavior among students which can inhibit learning and create an unfavorable classroom environment.

Participants will learn to distinguish between conflict, different forms of bullying, and alternative forms of aggression which can become detrimental to academic motivation, self-image, and community building.

Teachers will explore the healthy aspects of conflict and learn strategies that encourage more effective communication and social skills, through a range of activities easily adapted to any classroom. Tools such as Peer Mediation, Circle Time, Active Listening, and Reformulation are key to creating an environment that accepts conflict as a potential opportunity for growth. Through hands-on activities, participants will increase their understanding of group dynamics and their own ability to model and encourage active listening, empathy and emotional literacy among children, pre-adolescents and adolescents: today's students and tomorrow's active citizens.

By the end of the course, teachers will enjoy a greater awareness of their students' emotional needs and their potential for social and individual growth and will acquire specific tools and strategies to promote a positive climate in school and prevent destructive relational patterns.

**Caratteristiche:** Course for teachers of children until 8 years old. In an increasingly technical and specialized world, the need of a scientific and technologically literate citizenship has never been greater. Understanding the principles underlying scientific and technological knowledge and the practices and processes related to it is crucial to critical thinking and active collaboration in the problems of today's society.

Nevertheless, numerous reports warn about the incapacity of the educational system to offer quality scientific and technological education able to respond to such demands. (European Commission, 2015; OECD, 2005, 2006; Osborne y Dillon, 2008; UNESCO, 2008).

As a result, the European Union elaborates the report "Science education for a responsible citizenship" (UE, 2015) emphasising the need to teach sciences from a multidisciplinary STEM approach (Science, Technology, Engineering and Mathematics) that can contribute to our understanding and knowledge of problem solving as well as to guarantee equal opportunities for all students to excel at science learning.

STEM Education implies:

1. Responding to economic challenges present in all nations,
2. Identifying the evolving needs of workers towards a more flexible knowledge and new skills to adjust to today's work and social requirements, and
3. Emphasizing the need to resolve technological and environmental problems through scientific education of students. (Bybee, 2013; NRC, 2014, EU, 2015).

That is, STEM education is a model aimed to collaborate with promote and improve the study of the different disciplines its name stands for, specially focusing on their relevance and social responsibilities.

STEAM education guarantees the transversal aspects of education in order to achieve a greater contextualization and significant learning.
